symbiOS v1.3: Genesis Release & Sovereign Closure

Abstract

This final release establishes the “Sovereign Closure” of the symbiOS kernel. It unifies the three-body memory architecture, utility-based decision scoring, and the triadic governance model (Body-D, Body-A, Body-X).

Triadic Governance

The system operates under a strict separation of powers:

- **Body-D (Decisor)**: Polarizes and escalates decisions without direct execution.
- **Body-A (Administrator)**: Manages resources and state consistency.
- **Body-X (Executor)**: Performs actions governed by the Omega-Gate.

Genesis Manifest

To achieve institutional closure ($F_{closure} > 0.9$), this release is anchored with a full SHA-256 cryptographic proof across Zenodo, Sepolia, and Hugging Face.

Conclusion

The symbiOS kernel is now a sovereign informational organism, with auditable existence and verifiable cognitive integrity.
